WHAT WE ARE NOT TALKING ABOUT

WHAT WE ARE TALKING ABOUT

World Internet Topology

Brought to you by AT&T Labs

Presented by @QualComm

This visualization shows the structure of the Internet as of August 2008. Each node represents an Internet Service Provider (ISP) and is connected to other ISPs. The size of the nodes is proportional to the number of IP addresses they own. The color of the nodes is based on the geographic location of the ISP. The edges represent the connections between ISPs. The visualization shows a highly interconnected network with a central core of large nodes and many smaller nodes connected to the core.

AT&T's Network by the Numbers.

9,81

Percentage of data transmission capacity that AT&T's network is an equivalent of moving the entire Internet traffic to a single fiber optic cable.

1

AT&T's rank among bandwidth providers in the United States. AT&T is the largest bandwidth provider in the United States.

540,000

Hours of network maintenance that AT&T's network has performed since 2005. AT&T's network has performed over 540,000 hours of network maintenance since 2005.

\$6 Billion

AT&T's investment in network infrastructure since 2005. AT&T has invested over \$6 billion in network infrastructure since 2005.

36

Percentage of data capacity that AT&T's network has provided since 2005. AT&T has provided 36% of data capacity since 2005.

301,760

AT&T's employee headcount. AT&T has 301,760 employees.

97%

Percentage of the world economy that AT&T's network has supported since 2005. AT&T's network has supported 97% of the world economy since 2005.

49,000

Number of IP addresses that AT&T's network has provided since 2005. AT&T has provided 49,000 IP addresses since 2005.

166

Number of countries that AT&T's network has reached since 2005. AT&T's network has reached 166 countries since 2005.

3 Million

AT&T's network capacity in gigabits per second. AT&T's network capacity is 3 million gigabits per second.

160%

Increase in network demand per user since 2005. Network demand per user has increased by 160% since 2005.

7

Number of times that AT&T's network has been upgraded since 2005. AT&T's network has been upgraded 7 times since 2005.

World Internet by the Numbers.

320,000

Number of IP addresses that are active on the Internet. There are 320,000 active IP addresses on the Internet.

48 Million

Hours of network maintenance that the Internet has performed since 2005. The Internet has performed 48 million hours of network maintenance since 2005.

1.133 Billion

Hours of network maintenance that the Internet has performed since 2005. The Internet has performed 1.133 billion hours of network maintenance since 2005.

6.4 Million

Hours of network maintenance that the Internet has performed since 2005. The Internet has performed 6.4 million hours of network maintenance since 2005.

40 Billion

Hours of network maintenance that the Internet has performed since 2005. The Internet has performed 40 billion hours of network maintenance since 2005.

35,000

Hours of network maintenance that the Internet has performed since 2005. The Internet has performed 35,000 hours of network maintenance since 2005.

100 Million

Hours of network maintenance that the Internet has performed since 2005. The Internet has performed 100 million hours of network maintenance since 2005.

161

Hours of network maintenance that the Internet has performed since 2005. The Internet has performed 161 hours of network maintenance since 2005.

12 Million

Hours of network maintenance that the Internet has performed since 2005. The Internet has performed 12 million hours of network maintenance since 2005.

15 Million

Hours of network maintenance that the Internet has performed since 2005. The Internet has performed 15 million hours of network maintenance since 2005.

\$72.5 Billion

Hours of network maintenance that the Internet has performed since 2005. The Internet has performed \$72.5 billion worth of network maintenance since 2005.

NO ONE SAID IT WAS SECURE

“This is a story about four people named Everybody, Somebody, Anybody, and Nobody. There was an important job to be done and Everybody was asked to do it. Everybody was sure Somebody would do it. Anybody could have done it, but Nobody did it. Somebody got angry about that, because it was Everybody's job. Everybody thought Anybody could do it but Nobody realized that Everybody wouldn't do it.

It ended up that Everybody blamed Somebody when Nobody did what Anybody could have done.”
